

ABSTRACT

Sniff is a clothing that sells various items, especially in the field of clothing. In addition to clothing Sniff Productions also produces other goods such as sweaters, jackets and jeans teens and adults who are still making sales by hand to hand and place your goods on some distros in Bandung, Surabaya and Jakarta.

To meet consumer needs in terms of service, Clothing Sniff has a section that is specialized in dealing with consumers. Section is Part of Sales (Cashier), but the system still work in this section using a simple document that is hindering the smooth service to consumers.

The purpose of this final report is to design the Sales Information System using Prototype systems development methods, as well as for modeling the system using a unified Modeling Language (UML)). For programming language design software using java programming language, while Software / Tools used were Netbeans IDE .7 and MySQL as its database.

This information system of sale could be solution which can be use to make seller easier in working sales data, data item, data item report, data of selling report, and also sales data receipt much easier, faster and efisien so that it can help increase profits Sniff Clothing in improving its business.

Keyword : Sales Information System, data item, java, UML, MySQL
