ABSTRACT

In environmental education, information systems are tools that are absolutely necessary. Not imagine how an education institute can grow and develop in the absence of a computerized information system. Information systems at Asy-Syifa Boarding School Bandung has not yet considered effective when the student data collection process, the division of classes, as well as the difficulty of academic data retrieval and report generation because of the lack of computerized data.

In writing of this tugas akhir of writer research with prototype model by using observation technique that is with systematic perception to gone to object is directly [done/conducted] with eye indera so that yield a objective result. Besides writer also use technique interview that is with executed by question and answer is interviewer with personal party/ side] of source among others part Rois'am, Administration and head Islamic boarding school.

The results in ash-Shifa Boarding School Bandung can be concluded that with the construction of new student registration information system and the administration is expected to assist in managing the office staff and student data administration and reporting. In conducting this study can not be separated from the advantages and disadvantages, as for the deficiencies in information systems are still less reliable data security, while excess with computerized system is the speed and ease of registration process of new students and administration.
