ABSTRACT

SMP WARGA BAKTI Cimahi is one of peripatetic institute in the field of education and akademic. SMP Warga Bakti Cimahi hardly requires scheme of adequate software in managing and implements all school activities. One of them is is information system akademic at SMP Warga Bakti Cimahi which now has not is computerized and integrated carefully, so that still having many lacking of fulfilling requirement of the school or institution, especially to handle problem akademik.

As for approach applied in research is approach of structure using some auxiliarieses and workmanship technique, like flowmap, context diagram, and Data Flow Diagram (DFD). And expansion models applied is model Waterfall. Where model Waterfall is aktivity sequence performed within system development starts from determination of problem, requirement analysis, implementation scheme, integration, system test, applying and keeping. This model offers way of making of software in more reality.

With applying the shceme of academic information system at SMP Warga Bakti Cimahi is having the character of client server by using language pemograman of Visual Basic and database SQL 2000, expected able to water down in managing all data akademic, without having to happened redudansi data and mistake in managing the data. So the school or institution can reach purpose of which has been specified maximumly.
