ABSTRACK

The save and loan information system for “Pussen Armed” coorperation is the information system which is manage all of kind activities that have relation with saving and borrowing to the coorperation.

The present system still cannot make ser ease to use, it is cause the data management done with the manual book. In addition, the data management being ineffective because it will spent cost and time and will have so many disadvantages, like the book can destroy, lost and wet. So the problem can odds the work from the coorperatio worker.

The analysis model that used in this system development is structured analysis, where the tools that used for drawing the data model is Entity Relationship Diagram (ERD), beside that for the functional model and information flow use Context Diagram, and Data Flow Diagram, and the data collecting technique is observation, interview, and literature. The program implementation use Visual Basic 6.0 with SQL 2000 as database.

The goal of the save and loan information system is for develop the computerize information system, so it can be easily for the “PussenArmed” coorperation to manage the data of member, member saving, member borrowing.
