ABSTRACT

Bhakti Medika clinic is one of company it move on health service field. So that patient data management and working process specially clinic administration more efficient, bhakt medika clinic uses computer as tool. But computer isn't used maximaly, so it makes some problem., and minim security guarantee because data saved place is arcives formed.

From researching result has been done, has goal to research andkeep finished problem who happens at bhakti medika clinic. With design a patient data management system informatics. Development model used is waterfall method with structured approach using some tools and working ethnic, like flowmap, contecs diagram, and diagram flow data.

After implementation step passed getted result, it's data security is more guaranteed because it have been completed with user validation process. Except that patient data processing is faster, data saving is more compiled, and in report made time is needed faster that before so it help employee performance at administration field.

Keywords : Informatics System, Data, patient, Clinic.
