## *ABSTRACT*

*The purpose of research, is to analyze and design a system that can provide convenience to the user to make EAC member card with good quality, and providing more facilities as compared to using the old member-making system.*

*The method used is the method of analysis and design methods, where methods of analysis carried out through various sources (such as literature both in the form of books or resources from the Internet), and its design method will be divided into several stages to create the system as a whole (ranging from member making the application, until the application is used as a face to face with the user).*

*The results obtained are a reliable system to deliver more value in making the card member EAC (Eiger Adventure Club), to the users system. In conclusion, the user can feel the ease of use and feel the different experience in the manufacture of the card member and the extension member at. Eiger.*
