ABSTRACT

Research which compiler does aim to design a new system expected able to overcome problems happened in hotel Augusta bandung, especially in the case of room chamber ordering compiler sees difficulty fert by guest to obtain information about availibility of the other room chamber and facility in hotel Augusta bandung can be overcome by building information systems reservation hotel to base on web.

In execution to resch purpose of the stages steps which done at this research is data collecting,observation,system analysis by using analytical method and design orients data,and in implementation by using PHP with data base MYSQL and in modelling visually to build a solution in engineering software that is using microsoft visio 2002.

Excess from new system is at room chamber ordering process guest has earned direct to know number of available room chambers and other facility which they get without having to comes direct before hand to hotel Augusta bandung.

With existence of information systens reservation hotel to base on web is expected to earns is of benefit to the side of hotel especially and hotel outside party requiring information about hotel Augusta bandung.
