ABSTRACT

CV. BANDUNG BOOK CENTRE is one of book trading company and also as a distributor, located at Jl. PHH, MUSTOPA NO. 7, Bandung, as the aim of this company is always keep the consumer satisfaction, Purchase is one of the most important function to reach that aim operation the of company. But in system of organizing the books for example cash order there is always a problem at administration department. One of the problem is repeating order (redudansi) sometimes always happen when ordering the stuffs because the system still manually. And also when checking or controlling process sometimes there is different between system and manually, so the superior should make double check again or stock opname.

In order to increase the intern and externs consumer satisfaction, they need to make providing system such a cash order, and the consumer can purchase or order the books without any afraid less stock. Because providing system of the stuffs, in this way cash order is one of main point to fixed the consumer satisfaction, in other way, their need computerize system base on desktop so it could make well organize effect ordering system (purchase order). The method to arrange this system is structural approaching system and prototype as a device improvement to arrange the system which include, Flowmap, Diagram Konteks, DFD (Data Flow Diagram) Kamus Data, Normalisasi, and Tabel Relasi. Collecting data Technique with interview and documentation is held by CV BANDUNG BOOK CENTRE Cabang suci. and Application which used by the company is Borland Delphi programming 07 with data base SQL sever 2000.

Designing of this application hope can make easier to improved the system which already used and to increase consumer satisfaction. Also to support every single things process in the company providing system such a purchase cash system through the technology information.

Key Words : Designing purchase cash system application , Application, Purchase, Cash.
