Usage of System computerize in each governmental institution or company utilize to support job fluency process, goods have of course represent an very inseparable and important requirement because epoch demand which progressively go forward. Information system which walk in PT. Omedata Electronics still less optimal in its use especially in recruitment, data processing still done with manual system. That thing is based caused by is assorted of constraint faced by company.

One of the constraint which is often faced by PT. Omedata Electronics is the existence of lacking of in recruitment system old ones causing mistake appearance which do not be intended able to cause the truth of data less well guaranted and its efficiency of performance do not officer. Besides, recruitment system old ones cannot support organizational growth and requirement of information which wide of and also data-processing volume which progressively mount so that have to be made by new system matching with requirement of company.

Effect of constraints above hence information cycle which is walking to become to be pursued and automatically result of efficient officer job becoming not. Therefore, to increase the quality of and quality of information system service, needed by system development in company in this case in part of SDM PT. Omedata Electronics.

System development meant to know things any kind of which must be done in is optimal of usage of recruitment information system and out for make its application, so that made recruitment information system can walk better and can be exploited by part of SDM PT. Omedata Electronics.
