Volltus distro clothing sales field of t-shirts, pants, and other accessories, we are producing goods distro, clothing in limited quantities, and the availability of models, the latest Model.

To meet customer needs in terms of service, Volltus Distro has a special division constumer. Such division is an cashier, but work on the system is still using a simple document that hamper service for the consumers.

System development method used is Model Waterfall, while Software / Tools used were Visual Basic 6.0 and Microsoft Access Version 7.0 For DBMSnya.

Based on our research and after doing an alpha test and Betha of systems that have been made, the conclusion to be drawn is known that the system has been created to assist in sales of data processing and data products, data items, ordering data, user data, the data returns, customer data, speed in making reports and simplify the data storage related to the sale, so the delay in reporting can be overcome and the performance of outlets became more optimal.

Keyword : Data processing information systems sales, data items,data item,data items, orders data, user data, customer data and returns.
