Data Processing Application Program Students in vocational independence is an application designed to process data related to state students at SMK Merdeka Bandung such as, data processing student registration, student attendance data, and data transfer of students. Non optimal processing of these data led to difficulties in finding information about the state of the data and preparing reports of students that have not been adequate. Therefore, it needs an application that can support and solve these problems.

Based on these problems the author intended to make the final project by taking the title "Data Processing Application Program Students in SMK Merdeka Bandung". The data collection techniques were observation, interview and literature study, whereas the system development phase use waterfall method.

The author hopes that this application can assist staff in SMK administration Merdeka Bandung in processing the data processing of this student, both from data entry, data search, until it reports. The author also hopes that the application can be made can increase the performance of administrative staff who use this application.
