ABSTRACT

Many public transportation routes in Bandung make newcomers who are students or tourists confused on getting to certain locations. In addition, there are a lot of one-way path that makes the newcomers more confused in finding public transportation routes.

Preparation for thesis used the design method of RUP (Rational Unified Process). RUP is a software engineering method developed by collecting various best practices contained in the software development industry. The writer used UML tool to analyze, while netbeans mobility 6.8 was used for the application.

By creating this application, it is expected to be an alternative for people to find public transportation routes.

Keywords: Application, Angkot routes and Mobile
