ABSTRACTION

Cinema is a place to watch a movie show. Prospective audience has a complaint in booking theater tickets. Especially with regard to the issue queue in which each potential audience has a different level of activity. To that end, the prospective audience requires a system of information about online ticket booking.

The author designed a system of information about online ticket booking with the aim to provide facilities for the prospective audience.The author uses the method of field research in the form of interviews, field observations and literature. As for the method of system development, the writer uses prototype method. To realize the design of this program, I use some software. Among them are the Wamp server, Deamweaver for programming, PHP programming language and MySQL as the database.

With a system of information online cinema ticket booking is expected to help facilitate the prospective audience in an order ticket.

Keywords : information system ticketing online reservation, prototype method, Wamp, Dreamweaver, PHP, MySQL
