THE INFLUENCE OF BOOK VALUE AND EARNING PER SHARE ON STOCK PRICE OF MINING SECTOR IN BEI

Mutaqin Yuniatmoko

ABSTRACT

Investment through capital markets in addition to deliver results, as well as containing risk. Stock prices affect the condition of the company. Many factors can affect the condition of the company, including factors i.e. EPS, PER fuundamental, BVS, PBV, ROE. Some of these factors, investors prefer BV and EPS in estimating the price of shares in the future. Both of these factors are important in the view by investors in taking investment decisions, because it can estimate the continuance of the company and the net profit will be in the can.

A sample of this research is mining sector industrial companies listed on the indonesia stock exchange. The number of samples garbage bin there were 17 companies. To prove a hypothesis tested by the use of multiple, linear regression analysis the f, and test t- and to prove no deviation on the outcome of regression tested with classical multikolinearitas, (the test heterokedastisitas and autokorelasi).

The results of tests carried out against 17 samples publicly-listed property firm by using the assistance programs spss 17.0 for windows, indicate that partial in variable book value and earning per share influential significantly to stock prices. So did all the independent variable betawi together influential significantly to stock prices.
