ABSTRACT

The Influence Of Return On Equity And Dividend Per Share To Stock Price (Case Study In Mining Companies Listed On Indonesian Stock Exchange)

Investment is the placement of funds at this time to make a profit in the future. Before deciding to buy shares of investment companies investors need different information to be analyzed. Information necessary to analyze them are return on equity and dividend per share. The purpose of this study is to determine the influence of return on equity and dividend per share for the stock price either simultaneously or partial.

The method used in this research is descriptive method verifikatif. Sample selection method used in this study is the method of purposive sampling is an annual financial report 5 mining companies listed on the Indonesia Stock Exchange in 2005-2010 as many as 30 pieces of samples using multiple linear regression analysis. Testing the hypothesis in this study using the F test statistic and t test statistics. The process of statistical analysis using SPSS 18.0 for Windows.

The results of this study indicate that simultaneous variable return on equity and dividend per share and a significant positive effect on stock prices. Variable partial return on equity and dividend per share and a significant positive effect on stock prices, which means an increase / decrease in return on equity and dividend per share tends to increase / decrease the price of the shares of mining companies.
