ABSTRACT

The Information system of the process medicine data at rose clinic is the information system wich has the cout, and the medicare returing to patient. Concernig of the mentioned got optimal service get because the medicine data is still using manual system. Therefor, the service and Rose clinic not become and effective and effisiend, because the manual system the makes the service become slow and will be confiscated a lot of time and fees, it can be it can be a lot disadven pages because the book can be spoiled, gone, wet and tonred.

The information system of patient service development metode at Rose clinic is structured analysis, where the tools that used for drawing the data model Entity Relationship Diagram (ERD), beside that for the functional model and information flow use Flowmap, context Diagram, and Data Flow Diagram, and the data collecting technique is observation, interview, and literature, The program implementation use program Web and PhpMySQL as database.

The Medicine process information system is planned to bult information system in computeried, so that the Rose clinic can process the patient data, the medicine data is become easily.
