ABSTRACK

Ordering system is a very important aspect for any company, including the much-needed CV.MANDIRI JAYA constitute a certain company at Bandung budgingin sector service firm. Because of this,companies must have an organized ordering system can be able help a trade. Ordering system is underway at the company is still done manually record-keeping ordering until want for many time in process and often occur as record-keeping.

The research method I use is dekriptif method can be interpreted as a problem-solving process is investigated to describe the state of the subject and object of research at the present time, While the methods used in the development of the system is using Method Prototype.

After passing implementation phase of the obtained result is data security more secure, because it is equipped with the login process. In addition the data storage process neater & easier to manufacture paycheck, it can be concluded that this system can assist and simplify the order process, searchings data customers, and the making of report.
