Journal Ecosystem

Dripa, 2016

A researcher reads > 300 articles per year

Scopus

3.7 Hrs spent SEARCHING for articles per week

5.6 Hrs spent READING articles per week

Researchers spend an average **10 hours per week** searching for and reading articles

....of which, **3.5 hours** is spent searching for research articles and **5.5 hours** reading.

- Researchers in Chemistry and Life Science spend longer than average searching for articles and chemists spend longer reading
- Younger researchers spend **> 4hrs** a week searching.
- Researchers from China spend longer searching (**six hours**) and reading (**nine hours**) articles than any other country.

n=4,225

- A researcher typically reads **six** articles per week.
  - Chemists read nine per week. Mathematicians read four articles per week.
  - China-based researchers read one more than average per week (7 articles).
- **After searching and reading for 10 hrs per week only 42% of the papers read are considered important.**

6 articles read per week

42% regarded as 'important'

Scopus selection criteria

Scopus

Minimum criteria
• Peer-review
• English abstracts
• Regular publication
• References in Roman script
• Publication ethics statement

Journal policy	• Convincing editorial concept/policy • Level of peer-review • Diversity in geographic distribution of editors • Diversity in geographic distribution of authors
Quality of content	• Academic contribution to the field • Clarity of abstracts • Quality and conformity with stated aims & scope • Readability of articles
Journal standing	• Citedness of journal articles in Scopus • Editor standing
Regularity	• No delay in publication schedule
Online availability	• Content available online • English-language journal home page • Quality of home page

Netherlands Heart Journal Editor Delivers Dutch Citation Treat

POSTED BY PHIL DAVIS · JAN 30, 2013 · 19 COMMENTS

FILED UNDER ACADEMIC PUBLISHING, CITATION, EDITORIAL, IMPACT FACTOR, JOURNAL CITATION REPORTS, JOURNALS, PEER REVIEW, SELF-CITATION, THOMSON REUTERS, WEB OF SCIENCE

If you want to increase your journal's impact factor, the easiest way is through an editorial. Exempt from the process that sends manuscripts through editorial and external peer review (sometimes through several rounds), an editor is able to cite scores of articles from one's own journal and have it published quickly and without delay.

When Journal Editors Coerce Authors to Self-Cite

POSTED BY PHIL DAVIS · FEB 2, 2012 · 21 COMMENTS

FILED UNDER ACADEMIC PUBLISHING, BUSINESS JOURNALS, EDITORS, SCIENCE MAGAZINE, SELF-CITATION

In his landmark 1999 essay, "Scientific Communication — A Vanity Fair?" polymath Georg Franck warned readers that our dependence on citation counting could result in a "shadow market," where journal editors coerce authors into bolstering their citation counts by requiring that unnecessary journal references be added to a manuscript prior to acceptance.

Image via Wikipedia

A new article published in *Science* this week suggests that this fear may have already become a reality, at least for the business and marketing literature.

The article, **"Coercive Citation in Academic Publishing,"** analyzed the nearly 7,000 responses from an online questionnaire sent to researchers in economics, sociology, psychology and business. The researchers were particularly interested in whether editors attempted to coerce authors into citing more articles from their own journal. A coercive self-citation request was defined as a request for more journal citations without providing specific relevant articles or indicating that the manuscript was lacking in attribution.

The Emergence of a Citation Cartel

POSTED BY PHIL DAVIS · APR 10, 2012 · 53 COMMENTS

FILED UNDER CITATION CARTEL, GEORGE FRANCK, IMPACT FACTOR, JOURNAL CITATION REPORT, SELF-CITATION, THOMSON REUTERS

From an economics standpoint, self-citation is the easiest method to boost one's citations. Every author knows this and cites his own articles, however peripheral their relationship is to the topic at hand. Editors know this as well, and some have been caught coercing authors into self-citing the journal. Other editors have published editorial "reviews" of the articles published in their own journal, focusing entirely on papers that have been published in the previous two years — the window from which the impact factor is generated.

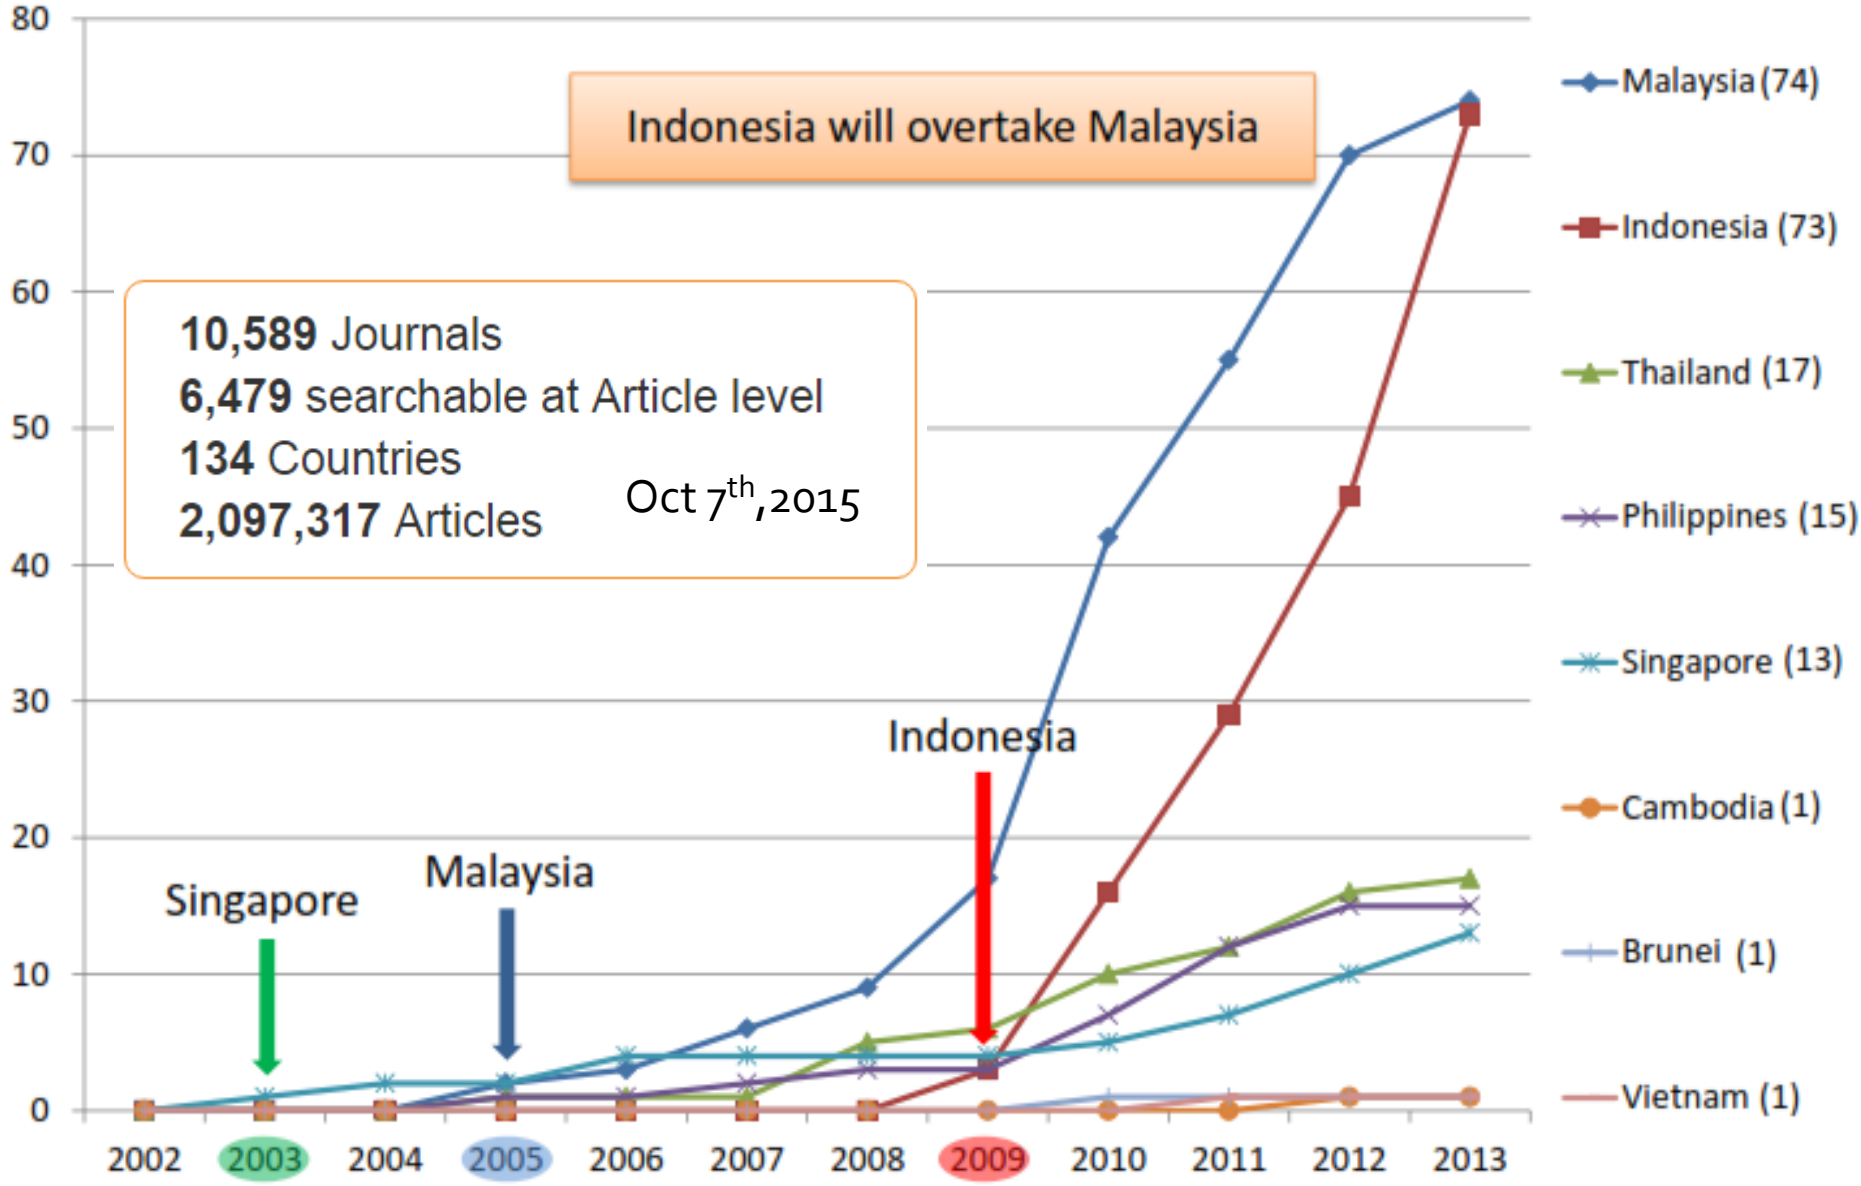

Domino tiles (Photo credit: Wikipedia)

There is a price to pay for this behavior, especially when it is done to excess. Thomson Reuters, publishers of the annual Journal Citation Report (JCR), routinely puts journals in "time-out" when their self-citation rates are excessively high, such that they greatly shift the journal's positional rank among other related titles.

There is another citation gaming tactic that is much more pernicious and difficult to detect. It is the citation cartel.

SMMRY

This is a 6 sentence summary of the text you submitted. Public SAVE

Such strategies including dopamine receptor agonists, MAO-B inhibitors and anti-cholinergic drugs provide significant symptomatic relief for a long period before L-DOPA is required.

Similar to L-DOPA, other drugs are limited by potential side effects since they do not effectively tackle tremor, postural instability and cognitive deficits.

Most of these drugs do not prevent or slowdown the degeneration of the remaining dopaminergic neurons.

Although there is scope for other molecules such as anti-glutamatergic drugs, CoQ , creatine etc.

Due to these serious lacunae, there is an immediate necessity to develop newer treatments involving neuroprotective, disease modifying and possibly curative drugs with lesser side effects.

Most importantly, these drugs should protect the dying neurons thus preventing further neuronal loss.
