ABSTRACT

System Inventory Information To The Coordinating Promotion Agency and Regional Capital Investment, Provincial West Java

With increasingly advanced technological world, the level of competition is kempetitif, This encourages any organization or agency to improve its performance. Efforts that can be done by an organization or agency is to manage and enhance its activity. At the Coordinating Board and Investment Promotion, inventory activity is important, this activity is a process where the demand for goods, purchases of goods, receiving goods from suppliers, making returns, and the reporting process incoming goods, outgoing goods and inventory laoran. However, the problem is all those activities are still manual. It is seen from the division that does the demand for goods have to write request data items on the form provided by the warehouse, the purchase of goods is done by checking again the goods which are not available in warehouses, manufacturing of goods made by BAP write again purchased goods , manufacture of goods returns should also write to diretur, and the reporting process incoming goods, outgoing goods and inventory that must be done with merekaptuliasi all documents relating to the demand for goods from the division and document the purchase of goods.

System development method used by writer is method waterfall. Inventory Information System Design in Promotion Coordinating Investment and uses Entity Relationship Diagrams and Data Flow Diagram. Designing a program using the programming language PHP with MySQL database.

With the establishment of this application, may assist in the activities of the warehouse inventory and improve service and performance.
