ABSTRACT

Based of Resulte analysis, which have been conducted that presented information during the time with system which is manual will very difficult to give optimal service, because there are still some weakness among others the problem of efficiency, accuracy of speed and data when seeking of data. This matter will very having and effect on fluency and continuity CV. Aris Jaya Meubel (AJM) selling. This Research is represent expected application can assist at CV. Aris Jaya Meubel (AJM) with system development of information CV. Aris Jaya Meubel (AJM) selling.

In development in this system we used Prototype Method. This method have many steps. Step one knows what needs then do the fast desain then that desain will develop to the Prototype contruction. That prototype will selection by user and than do the repair, after repaired, this software will be the usefull product.

To make that application program, we need a hardware likes computer and software tools like Windows XP and Microsoft Accses For language programming used Microsoft Visual Basic 6.0.
