ABSTRACT

Eirien Vestalia Tudikromo. 44305031. *World Health Organization Role on Reduce Maternal Mortality with Program Making Pregnancy Safer in Indonesia* (2002-2007). Bandung. 2009.

Maternal mortality case in Indonesia is the biggest among the ASEAN countries member, approximately 307 on 100.000 births. WHO as one of the international governmental organization which are focusing on health matter, WHO helps Indonesian government on reducing the maternal mortality through the program making pregnancy safer. Based on the problem, the main question of the research was "how WHO roles through program making pregnancy safer on reducing the maternal mortality in Indonesia?"

Based on the research problem, the theories are divided into mayor and minor premise. The mayor premises are International relation, pluralism, international cooperation, international organization and roles. While the premises minor are WHO and maternal mortality. The research method was Ex Post Facto method, researching all the occasion which has happened and then looking backwards to see what factor that could made it happened.

The hypothesis of this research was "WHO has a role on reducing the maternal mortality problem in Indonesia trough the program making pregnancy safer (MPS), with focusing on 4 strategies, that is quality and service coverage, cross sector partnership, empowerment of woman and families, and also empowerment of the society. So that the maternal mortality could be diminished"

The conclusion that was received from the result of this research that program making pregnancy safer from WHO give a role on maternal mortality in Indonesia, and the number of maternal mortality was diminished significantly.

Kata Kunci: *World Health Organization* (WHO), *Maternal Mortality*.
