The main duty of PBS. FM Radio is to entertain and convey important information to community. In conveying information, PBS. FM Radio experiences some difficulties in managing and processing the data on Radio Advertising Placement/Publication Approval Letter, Radio Report Monitoring, Broadcasting Proof, Employees Data, Exit Letter, Employee Presence Report, Advertisement Recording Letter, Song Broadcasting Approval Letter, Employee Salary Report, and General Cash Report.

There fore, PBS. FM Radio's information system is highly needed. This is to be effective and efficient in managing, processing, and storing data so as to facilitate in conveying information as a report and an evaluation material.

After the software has already been applied, it would ease every part in accelerating and facilitating the works that use client-server computer network integrated in a database in order to convey effective information when it is needed sometimes. It can also provide data security in case there occurs anything incurring damage on the original data.

Keywords : Information system, client server
