This study aims to know how the Communication Patterns Of Young Parents In Shaping Positive Behavior Of Children In The City Of Bandung. This research aims to know how the patterns and children in purpose to forming the child's personality. To answer the purpose of this research, we have to analyse based on communication process, parenting pattern, and correlation.

This research approach using qualitative research approach with descriptive methods,total informant in this research counted as 4 people, and 1 key informant in which the technique of data collection done in-depth interview, documentation, literature, and internet research. Data analyse technique done in data selection, clarification data, formulate the research, data triangulation, and analyse the research.

The result of this research is communication proess will running well if it has been prepared in advanced and carefully drafted, parents do a communication and giving a lead of attention positively,parenting pattern which prioristing the interest of child, supervise, and also control children, a relationship between parents and children can help them to be more execited about the activity and achieving the desired objective goal.

The conclusion from this research is positive behavior will appear because the proximity of the parent is positioned as a best friend for the kid, having a believing attitude, and applied properly, so children will feel comfortable with their parents and children will grow up become a person with positive behavior.

And for that, researcher giving suggestion to parents to get involve with a good communication pattern, with a touch compassion for children personality, so we can develop it to the positive way

The main keyword of this research is : communication pattern, positive behavior, young parents, and children.
