*Bangka District Education Office is one of the local government institutions that manage the information system of education in the district of Bangka. Some of the issues pertained incriminate the officers and staff in offices or in schools that there is not yet available appropriate educational information systems and efficient use of time. To improve the performance of officers and staff are not enough tools that rely on manual, while the demands of society to education is increasing. Not only that, the handling of administrative inaction, especially the database of an education-related, either directly or indirectly, but certainly can affect the academic process.*

*Of the problems above, there should be analysis to find the needs that needed to build the education information system that can meet the information needs of school data, personnel data, student data, data, facilities, curriculum data and financial data of existing educational institutions in the regency of Bangka. Based on the analysis, then built a model of educational information systems that can handle the academic database processing. Software database model is built with PHP as a design tool display interface and MySQL as its database of media processing.*

*Based on the results obtained it was concluded that the model has succeeded in building the information system can assist the processing of the database is in Bangka District Education Office, so it can produce a very accurate information.*

*Keywords: Information System Database, Database*
