*Koperasi is one aspect of the economic support, especially people of low and middle economic community. These cooperatives should be developed so it can give good service to its members Koperasi Simpan Pinjam Sinar Mutiara is one of the koperasi that helps support the economies of local communities by providing storage services and lending money with low interest.* S*ervices and data processing are considered ineffective and inefficient due to the existing system is still stand alone.*

*Therefore, it need an information development based on client server. Data to be processed are master data which consists of data member and data employe and transaction data consists of saving, loan and loan payment data. The resul of this procedure is saving and loan money information system in koperasi sinar mutiara based client server where user consist of the leader of koperasi, administration and cashier.*

*Based on the test concluded that a system built to help process data effectively and efficiently include data member, saving and loan data, and loan payment data.*

*Keywords : Information system, Koperasi, Sinar Mutiara, saving and loan money, client server*
