In today's fast-paced and requires a lot of time often makes us less time to talk to each other casually and trying to know each other people around us. Besides the need for something important, we often want something that is always available and we can use right away. Within the scope of our spiritual life is often present in those above us. Something that often happens is that people lack the desire to greet each other and be together after worship, the limited number of complementary tools such as the biblical and spiritual lack of durability of digital storage media, audio / video. One way to overcome the above problems is to build a web community. This web can help people to know each other and discuss, although not directly face each other.

The method used to build the system in the data gathering phase is observation and book study while system development phase use model of waterfall. In the construction of the system, the website of choice because it saw the development of Internet technology, who fast in this time and can be accessed virtually anytime and anywhere.

This web community will be able to become a medium of communication between people and makes people get a spiritual content in the form of biblical reflection and digital, effectively spreading the material in the form of pdf, audio and video. In addition, after implementing this web administrators can see how far this web portal is useful and help people through the forums and the number of members.
