The development of information technology and communication is pushing through so many kind of education institution to use the *e – learning* system to increase the effectiveness and flexibility of learning system. The un-optimal learning process in the class is recognize as the vital problem that necessary to give the solution very soon.

Observed from case of all high school in Bandung, especially SMU PGII 2 Bandung, where the teaching system is between teacher and student directly face to face in the class. Learning activity in school done in class regularly every Monday until Friday, as always start from 07.00am – 1.30 pm.

Learning activity like this is not good enough because be confined by place and time. And more expensive books that student and teacher need to afford for the source as a guide as usually the same like the old books. The evaluation of the development of student learning activity shouldn't optimal so the school should give them private class. Even both of student and teacher is boring to face the same method of learning activity every day.

The management of scoring the task still kept manually by the teacher. The risk of document lost is so high, considering the number of the student is not small.

Key word : Information Technology, e-learning
