The developtment of information technology and communication is pushing through so many kind of education institution to use the *e – learning* system to increase the effectivity and flexsibility of learning system. The unoptimal learning proses in class is recognize as the vital problem that necessary to give the solution soon.

Observed from case of all school in bandung,especially senior high school 1 bandung,where the teaching system is between teacher and student is directly face to face in school. Learning activity in school done in class regularly every Monday untill Friday,as always start from 07.00am – 2.30 pm.

Learning activity like this is not good enough because be confined by place and time. And more and more expensive books that student and teacher need for the source as a guide as usually the same like the old books. The evaluation of thye development of student learning activity shouldn't optimal so the school should give them sothe school give them private class. Even both of student and teacher is boring to face the same method of learning activity.

And scoring about all the exercise is saving manually by the teacher so it could be lost if its not careful about it

Key word : Information Technology,e-learning
