ABSTRACT

Majoring in information management in Indonesia university computer data processing students final assignment was done in a small way, students here had to go to campus to see the thesis of information and must wait in line at the time of the application process and registration prosal research testing programs, seminars and trial. To provide convenience at the time of the registration process and submission of research proposals. The purpose of this research is to assist the process Sekjur employee, assist students in the provision of good information and the value of the scheduling information online.

In the process of data collection in order to solve the problem, the authors used data collection method that is descriptive, with observations and interviews. And to design its software applications, the authors use the method prototype development. To solve the above problems, then built a software application and thesis proposal online.

Based on the results of tests that have been made, the application software Final Project Information System Students can help the Department of Management Informatics UNIKOM for the final task of data processing students.
