ABSTRACT

Apotik Vita Sari is an apotek thatsells and distributes various brand of drugs. This apotek is making a purchase from suppliers and then distribute it to stores or customers. In dealing with the purchase and sale, they still use manual handling instead of computerized process. Therefore, some difficulties are encountered in data management, especiarly thet the goods at the warehouse are not yet integrated with those purchased or sold.

Research methods used in conducting this research is descriptive method, with structurized study. Development on information systems of drugs purchase and sale will be implementing the Waterfall method, while the following phase: first phase is the System design, Second phase is Requirements analysis,thired phase is system design, fourth phase is listing program construction, fifth phase is testin and sixth phaseis implementation. The software used Visual Studio.Net 2003, Microsoft Acces 2002 for the database and Crystal Report for conducting report.

Results of the research is a program that built the client server base, to assist the Apotek in purchase and sales transaction process, also to manager warehouse supply so all the data could be accessed by employee and manager through a database system.This also applied to search purchase and sale transaction record of Apotik Vita Sari.

Key wods: research, sale and purchase, information system
