ABSTRACT

The development of information technology is now so rapidly and penetrated into various fields. Information technology can not be separated with the development of Internet information world of today. The information presented in the Internet world is very global and always cultivated on time so the time updates of information very quickly. To create a website dynamic and easily updated every time the browser needs a program that is able to process data from the client computer or from a server computer itself so easily and conveniently presented in the browser.

Distributions Bloods is a company engaged in the production and sale of apparel, merchandise and other accessories. During this entire sales activities do still manual and there are many obstacles.

Designing a website on the sales distributions Bloods aims to facilitate the public in obtaining information shopping (online) previously known from the mouth or the mouth of any of the brochures, so it does not does not save time, this will make shopping easier for people in the (online), so can mengefisiensi and effective. This study aims to build an online sales system. System design in the creation of websites on the sale of Bloods distributions is developed using some software that Macromedia Dreamweaver 8, Wampp Server which is a combination of Apache Web Server, PHP and MySQL. By using Macromedia Dreamweaver 8 then the website will work faster and easier.
