Now, Management data processing at CV.Defourdelta still use manual way, so it is cause some trouble like unarranged of cooperation data archives so data searching can be difficult being a reason information management system application which can give information about management activity at CV.Defourdelta to be developed.

The Management Information System application are builded by descriptive research method with the type of research is case study to the cooperation itself, where the data collective technique use observation, interview and library studying. For data analysis use waterfall method but for analysis model use structured analysis those are ERD (Entity Relationship Diagram) to drawing data model and DFD (Data Flow Diagram) for drawing functional model. The system developer software is Adobe Dreamweaver CS3 with database MySQL and php for programing contruction. The data can process in this system are: employee data, customer data, attendance data, salary data,order data and payment data System outputs are employee data report, customer data report, attendance data report, salary data report, order data report and payment data report.

Based on testing it can be result that: syntax mistakes can be happen because messaging process cannot be perform by maximum
