ABSTRACT

Walagri Blacksmith is a small business which runs in making art knives which made by using traditional knive making techniques. All this time Walagri Blacksmith markets their products on various forum and social networking sites, while the online transactions and data recording activity all this time still done by using manual techniques.

The research goal is to design ***"Online Sales Information System at Walagri Blacksmith Bandung"*** *using development method that was used which is prototype method, using modelling tools that was used which is flow map, context diagram, relation table, entity relationship diagram, and using observation and interview for data collection techniques. Software that I used to designs this information system is Adobe Dreamweaver CS4, PHP programming language, and MySQL as database.*

The existence of this online sales information system that I made hopefully can help Walagri Blacksmith in doing their sales activity, data recording and can produce sales report which required by the company leader.

Keywords: Sales, Prototype, Online.
