ABSTRACT

World Internet progressively expand, especially in information and communications technology, both for intern and public. As for intention of compilation of this skripsi is to develop, build Information And Communications Technology Asset Management Information System Base on Web on Informatic and Communications Duty. With existence of this system, expected by asset data processing and management can be managed better, so that all information and communications technology asset had on Informatic and Communications Duty earn monitoring by totally.

To reach the the target, so necessary by steps which consist of systems analysis phase by using approach of structure, while to design and Information And Communications Technology Asset Management Information System Base on this Web implementation use PHP programming Ianguage, Mysql database with Xampp application software as Web Server, while this information system development of Prototype method.

Require to continue to be conducted by development to system because technology progressively continue to expand in this time, so that existing system can be exploited morely optimal.
