ABSTRACT

Faculty of Politics Governance, one of faculty at Institute Pemerintahan Dalam Negeri (IPDN). Academic activity is very important for education instance. Its divide become several activity that have related, one is the data data processing of grades. Data processing system of grades that going in faculty of government politics, nowdays the process almost done manually cause many problem, service grades information for student still unoptimal and slow. Hence, the solution to solve the problem by designing an Online Grades Information System.

The method used in developing Information System of Online Value at Faculty of Politics Governance IPDN Jatinangor, use prototype paradygma. Tools that used for drawing system model is Flow Map, Contexs Diagram, and Data Flow Diagram, also use data dictionary for designing data basic, normalization, and Entity relationship Diagram (ERD). Implementation this ordering information system, needs proponent components to work well. This components are web files using PHP programming language and MySQL database for data saving.

The purpose of building Information System of Online Value at Faculty of Politics Governance IPDN Jatinangor is to Facilitate civil servant in processing student's value data and student to access value information by online.
