ABSTRACT

Banda Aceh city Health Department is one of the government agencies engaged in health services for the community. City of Banda Aceh health agency has several sections and subsections in which there were many employees. Medical Officer of the city of Banda Aceh have difficulty in processing the data for these employees as an employee data processing still using MS. Excel and archiving. The purpose of this research is to know the system is running, perform analysis, design, implementation and testing are limited to the Design of System Information of Staff Administration in Dinas Kesehatan Banda Aceh.

The method used is prototype method is both a method and system development, when the stage is running there is a lack in the previous stage can be performed directly without any addition or improvement must first complete the final stage. The software for the design and implementation of a program using WampServer 2.0 The access database GUI, the database MySQL, NetBeans IDE 6.9.1 as an editor writing program code, iReport 3.7.2 and jasperreports-3.7.2 as the report processing.

Based on test results expected from the application of this data collection staff can assist the city health office in Banda Aceh in particular subsections of the general and employment in terms of ease of data processing personnel and personnel reporting.
