ABSTRACT

Puskesmas is one of peripatetic public service institution health area given independence by Public Health Service Regency/ Town to carry out the operational duties and hold responsible to regional health development [of] its job, Therefore writer propose the existence of information system and do the computerized system making to increase service puskesmas especially part of taking care of to lodge. Way of data processing of patient still a lot of done in manual, still there are depository [off data which less be peaceful in because storage media of data like that result easy to the happening of damage or lose and also archives heaping and confiscating place.

Hence solution from above problems solved by using method waterfall using assistive appliance like diagram emit a stream of the document, context diagram, data of flow diagram, and also database scheme by using entity relation diagram, normalization and table relationship.

For existing problems of writer catch up making of application program to support to finish the existing problems. As for excess of making [of] application program made by that is enable a application program to communicate and share the data of trough communications network. If needed by that making of application program at system of data processing of patient take care of to lodge require to be reevaluated and adapted for by activity 'Unction so that can function effectively.

Keyword: information system, pregnance and confinement chek up patient, waterfall.
