ABSTRACT

Developments in science and information technology has been covering the world community today. As part of the world community, certainly did not want to miss the information technology and the developing world. There are many ways that can be taken to identify technological developments that are happening. One way is to utilize the computer as a tool for processing data and information. Citra Car Center uses the Internet just to send emails to its customers, of course this does not make the company grow rapidly. So the companyy has a desire to follow the development of more advanced age using the internet as one of the media in conveying information and reservations partnership offer the company's products to the public.

Design systems that are used by waterfall method, a tool used to design systems in the form flowmap (document flow chart), context diagrams, data flow diagram (DFD), and data collecting technique using the research method by observation and interviews. While the web application is built using PHP because it can connect to the MySQL database and all the facilities we needed to build programs for windows applications quickly and efficiently. Is by using Macromedia Dreamwaver also facilitate the user in using this application.

Designed system is an information system in order Citra Car Center. This system can offer several advantages compared with the manual system, which is efficient data entryjobs in the goods, promotion, place and time are not involved.
