ABSTRACT

Baraya Travel is a company engaged in the transportation services starting from 2005. At first only has 3 outlets namely one outlet in Bandung and two outlets in Jakarta. And now has nine outlets in Bandung and 17 outlets and has had a fleet of over 100. Travel Baraya not currently have a computerized system for booking tickets that have come to the outlet. Even for still using handwritten notes so that when a lot of customers, employees would have difficulty and hinder the performance of employees.

That requires an information system that can assist in processing the data so that the results in terms of the reports to be even better. On this system is used waterfall method with the sequence analysis of needs, system design, writing code, testing program, and program implementation.

While supporting software using MySQL as database and programming languages HTML, and PHP. Data collection techniques by means of observation and is expected to wawancara.Sistem Information make consumers in ordering tickets online. Thereby increasing profits for the company to have eased her ticket from anywhere.
