ABSTRACT

ShoKai As Alternative Media of Japanese Language Educational System in Basic Level

In the education world nowdays, japanese languge has been introduced as early as senior high school. Along with the development of technology , the educational system with convensional methode is moving toward to a wider and better system. In this point,the writter's term is the educational system based on multimedia especially the utilization/the use of interactive CD.

In this research, the writter made a japanese language educational application for basic level named 'Shok-Kai' that based on the applicatiom of Macromedia Flash profesional 8 and supported by coreldraw and adobe photoshop. This Shok-Kai has a topic about kaiwa (conversation) and Kotoba (words) for everyday conversation. Since japanese has a different pronunciation from indonesian, Shok-Kai also teach how to make a right pronunciaton.

In this research, the writer also use a methode of the research and development which has a purpose in the making of Shok-Kai itself and to find out the apraiser of users. The writer did some research to 15 students of the 3rd grade and 1 teacher in SMUN 1 Margahayu by collecting some information included some questionare,interview and literatur study.

Most of the student thought that Shok-Kai is good enough and could be performed as an alternative way to learn japanese language in basic level. In this research , the writter suggests that the students and the teacher s could use an educational media in the teaching and learning program. And for the other researcher,they could do some effectivity test in this Shok-Kai system.
