ABSTRACT

Academical data processing is a main activity which is doing by SMK Al - Amah. *The system in processing being less servicing, because the officer has to write academical data in documents. Occur be mistaken on the academical data processing. Also both of data damaging and losing because of saving media that is in only on the document form.*

The purpose of doing a researching is to design an academics information online system at SMK Al - Amah, *database designing, and to know an user comments to information system that is applied in* SMK Al - Amah. *Developing of method which is used is prototype method. With the tool model which is used is structured analysis method. Software that is used for making this system of information are PHP, MySql, and Macromedia Dreamweaver MX.*

The system information is built by expectation to make easier in processing and academic serving at SMK Al - Amah. *Beginning from receiving phase of new student, selection, division of class, scheduling and assessment, and can yield an information expected.*
