PT. Sima Technologies is a company engaged in design engineering and manufacture of production machinery for industries such as production machinery for the garment industry, Laundry, charging (filling), packaging, and special applications. Most customers of PT. Sima Technologies is located in Bandung and the surrounding area. It is not separated from the many garment factories in the area of Bandung. However, due to limited promotion by advertising so it can not reach a wide market.

In this thesis, the authors implement a website that provides information about products, sales and reservations online at. Sima Technologies. This website is created using the mysql database, using PHP as a programming language and Apache as the webserver.

From the results of the implementation and testing of web-based sales information system at PT. Sima technologies can be concluded that the process of ordering and sales transactions can be done online so it can be done anytime and anywhere.
