ABSTRACT

POLICY IMPLEMENTATION ANALYSIS DATA MANAGEMENT INFORMATION SYSTEM (MIS-Data) WORKING DEVICE UNITS IN REPORTING AREA (SKPD) TO REGENT IN BANDUNG DISTRICT

(A Study of Library, Archive, and Information Systems Development In Bandung District)

An information system can be developed because of the policies within an organization and planning in advance without a good system planning, system development will not be able to run as expected. Data Management Information System (MIS-Data) is a collection of data (data gathering) the results of the implementation of government development in the region resulting from the Bandung regency SKPD County / District to Village / Village and a completeness of the management of these processes provides information for the regents to support operations and decision making within an organization.

Theory used in the study of Mazmania and Sabtier that called implementation analysis framework model. They mengkalsifikasikan policy implementation process into three things: 1.control problem 2. ability of policy 3. stage in the process. The research method used is descriptive research method with qualitative methods. Techniques to determine informant used purposive technique.

SIM-Data policy implementation in SKPD Reporting to the Regent in Bandung Regency is a process of inclusion of each SKPD report to the Regent. The report is entered by every SKPD to be reported to the regents. Reporting system data through that MIS-data. Problems in the system common in off electricity, network or software that is in the system so that reporting is often delayed. And disadvantages in terms of policy however is still an internal system or intranet environment with fellow SKPD in Bandung regency. Implemetasi SIM Policy Analysis-Data in District Bandung in the overall implementation has been going pretty well.
