ABSTRACT

Research which compiler does aim to design a new system expected ables to overcome problems happened in Hotel Istana Bandung, especially in the case of room chamber ordering. Compiler sees difficulty fert by guest to obtain information about availability of the other room chamber and facility in Hotel Istana Bandung can be overcome by building information system reservation hotel to base on web.

In execution to resch purpose of the stages step which done at this research is data collecting, observation, system analysis by using analytical method and structured design and implementation by using PHP with database MySQL and in modellinh visually to bulid a solution in engineering software that is using Microsoft visio 2007 and Dreamweaver.

Excess from new system is at room chamber or dering process guest has earned direct to know number of available room chambers and other facility which they get without having to comes direct before hand to Hotel Istana Bandung. With existence of information system reservation hotel to base on web is expected to earns is of benefit to the side of hotel especially and hotel outside party requiring information about Hotel Istana Bandung.

Keyword : System, Reservation, Hotel Istana Bandung.
