The process of inventory systems and electronic vouchers MKIOS transfering carried out by many Sub Dealer Telkomsel felt still not optimal because it uses manual methods which complicate the existing human resources in the run the system, so some common mistakes in it.

To solve the problem, necessary to develop a desktop-based computer applications. Development of these applications are based on company operational standards Sub Dealer registration is starting from a reseller, MKIOS product transactions, including reservations and transfering up to the reporting MKIOS product sales MKIOS. Some of the steps done in building this application, the data collection phase using the method of Literature Review and Field Study on Sub Dealer-related and stage of development of the system using the Waterfall method in which there is some process of one of them is a good testing process of the applications built as well as to users who use applications.

From the results of testing done development and overall analysis concluded that the application built able to overcome the problems that exist in most of Sub Dealer Telkomsel to provide convenience and reduce the mistakes that often occur for existing human resources in carrying out related system.
