Bandung is one of the city in Indonesia which is rich in old buildings of cultural heritage. Even this city had become a place of architectural experimentation in the early centuries to -20 after the status of gemeente (municipality level) on 1 April 1906.

With expected technological approaches of information about historical buildings in Bandung can be passed on to the wider community with the aim that old buildings can be preserved and enable the back like in his day. This condition can be met with a Geographic Information System (GIS) that can provide the data attribute of an object map and spatial data.Geographic Information Systems (GIS) is an information system that is used to enter, store, recall, process, analyze, and produce geographic referenced data.

Given this historical building GIS can facilitate bandung heritage in managing data and convey information to the public the historic building.
