Dr.emi creative design is a software house of web based application developer located in Bandung, West Java. Production activities include the development of web based application projects, retail software, merchandise and office stationery.

Dr.emi creative design has 2 (two) branches outside the city, namely Subang, West Java and Solo Central Java. To make the process of buying or selling goods, dr.emi creative design using web based applications, but the application is proved to take quite a long time to search for goods data. This problem causes by the client's computer in the branch is checked directly online to the server. The problem is more complex when the sales data that have not been saved into a database server, when the connection is lost.

To overcome this problem, then made web based applications that have the feature database synchronizer, to analyze and understand the system that existed before. It is expected that this software will further accelerate the sales transaction process and simplify the process of selling goods report.
