ABSTRACT

Singandaru Public Health is a health institution engaged in health care that seeks to improve performance and deliver quality health care but in health care systems, patient registration in registration officer still keep records on the registration books, data processing each poly waste a lot of time, the pharmacy must be repeated to check the availability of the drug so that it makes patients want treatment have to wait quite a while.

System approach method that is used to design public health service planning system is a method of system development life cycle or systems development life cycle (SDLC). SDLC is a highly structured approach, illustrated story (Waterfall) and is used to describe the output of one stage is the input of the next stage and it is possible to return to the previous step when a particular decision should be reconsidered.

The final results of this study is a healthcare information system is expected to assist in the processing of patient data, data poly, facilitate the search process the data in the pharmacy drug stock.
