ABSTRACT

Timbul Jaya Putra is a company engaged in the sale of furniture. Timbul Jaya Putra sell furniture from the goods produced by its own Timbul Jaya Putra. In the marketing activities of furniture companies still use the Timbul Jaya Putra to offer consumers manually. to increase promotion of existing products in Timbul Jaya Putra. It is only fitting built an information system. in order to facilitate the company to manage information such as campaign management, inventory and management reports are included in Timbul Jaya Putra.

To handle this, the authors build a system based on website sales using the prototype. As for the data collection methods used were interviews and observation. The model of development used several Bantu tools and working techniques, such as flowmap, context diagram and data flow diagram (DFD), the programming language used in designing and implementing systems-based website sales is to use PHP (hypertext preprocessor), CSS (Cascading Style Sheets), MySQL database and the jQuery framework.

Objectives to be achieved in the development of website service is to help process the data item, customer, sales order transactions along the Timbul Jaya Putra. with website service is made possible by high-speed transactions as compared to conventional transactions and the lack of attachment to place and time in doing a transaction.
