Trusteeship is an important activity in academic activities, trusteeship is the process of consultation between the lecturer guardiato the student in determining the plan of study for students to follow the educational program in the semester that will be pursued. In the process of the ongoing custody problems sometimes arise because a lecturer guardian usually do trusteeship to the number of students that much so it takes a long time. Often students and lecturers also guardian can not be met directly causing students late in the process of Trusteeship.

Trusteeship can take more effective and efficient if the use of Internet technology, so that the guardianship can be held without having to meet immediately. This application is designed to facilitate students and lecturers guardian in the process of trusteeship.

Therefore, with this application and the online system is expected to ease the process of guardianship and delivery of information value.
